F. Hypermethylated
GO Biological Process
transcription, DNA−dependent
system development
single−multicellular organism process
regulation of transcription, DNA−dependent
regulation of RNA biosynthetic process
regionalization
pattern specification process
multicellular organismal development
cell differentiation
anatomical structure development
GO Molecular Function
transcription regulatory region DNA binding
sequence−specific DNA binding transcription factor activity
sequence−specific DNA binding
regulatory region DNA binding
organic cyclic compound binding
nucleic acid binding transcription factor activity
nucleic acid binding
heterocyclic compound binding
DNA binding
binding

G. Hypomethylated
GO Biological Process
regulation of transcription, DNA−dependent
regulation of RNA metabolic process
regulation of RNA biosynthetic process
regulation of nucleobase−containing compound metabolic process
regulation of nitrogen compound metabolic process
regulation of macromolecule biosynthetic process
regulation of gene expression
regulation of cellular macromolecule biosynthetic process
regulation of cellular biosynthetic process
regulation of biosynthetic process
GO Molecular Function
sequence−specific DNA binding transcription factor activity
organic cyclic compound binding
nucleic acid binding transcription factor activity
nucleic acid binding
metal ion binding
ion binding
heterocyclic compound binding
DNA binding
cation binding
